

Classwork 3/19/2020

Fractions on the Place value chart

Today you will work on this presentation and you will also spend 10 minutes on First in Math.

 Good morning and hello Fourth Graders from Mrs. Cronin!
Today's Date is: 3/19/2020

 Where To Find Your Work: Please go to my Weebly site <https://lynncronin.weebly.com/> and download the lesson marked 3-19-2020 Grade 4 Adding Fractions it will continue the lesson from yesterday. When you are done, please complete Home Link 5.3
Remember that you will know it is your work because the background will be yellow, just like your folders.

I will again try to post this page on OneNote, but if you look in my Weebly each day you will have everything that you need.

If you have any problems at all, please email me! lcronin@wtps.org

 Learning Objectives:

Math: By the time we are done with this lesson you will remember what decimals and fractions look like in blocks and you will be able to add fractions with like denominators.

 Learning Activities:

Math: Please work through the PowerPoint and answer the questions that are asked of you. Finish by completing Home Link 5.3

 How I will see/check your work: Email me please

 How We Communicate: email lcronin@wtps.org

**So... lets look at the place
value chart and think about
what decimals (and fractions)
really look like!**

If these are our ones, tens and hundreds,
what does a tenth look like?

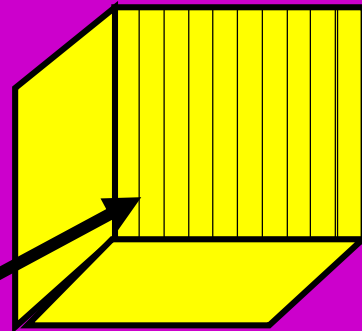

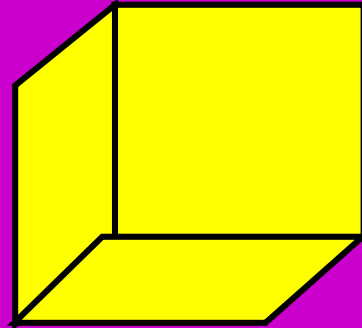

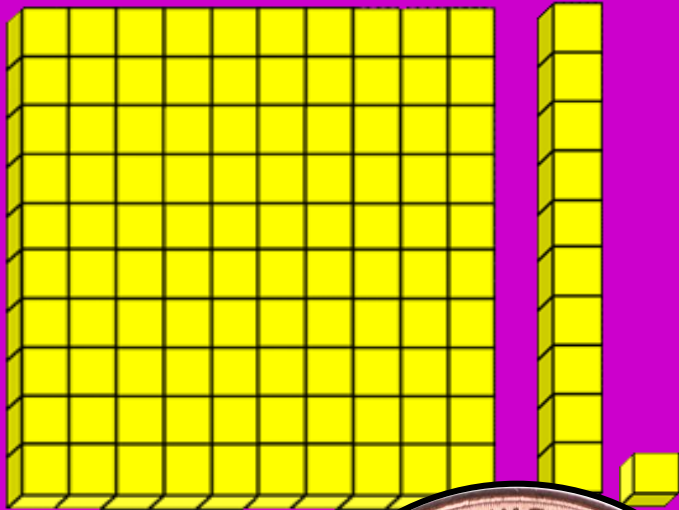

If these are our ones, tens and hundreds,
what does a tenth look like?

Well – a tenth is one tenth of a cube – think about how small it is if you cut one of these cubes into ten pieces!

And a hundredth means cut a tiny cube into 100 pieces.

A penny never seemed so small!

The point of all this is to show you just how seriously tiny the decimals actually are.

And yet – we use them every day – as pennies!

A single slice of a cube is worth one cent!

Think about that as we flip back to fractions

This circle is divided into 20 pieces.
What fraction is shaded in blue?

This circle is divided into 20 pieces.
What fraction is shaded in blue?

Think about that as we flip back to fractions

This circle is divided into 20 pieces.
What fraction is shaded in blue?

$$\frac{10}{20}$$

This circle is divided into 20 pieces.
What fraction is shaded in blue?

$$\frac{4}{20}$$

Add them together!

This circle is divided into 20 pieces.
What fraction is shaded in blue?

$$\frac{10}{20}$$

This circle is divided into 20 pieces.
What fraction is shaded in blue?

$$\frac{4}{20}$$

Add them together!

This circle is divided into 20 pieces.
What fraction is shaded in blue?

This circle is divided into 20 pieces.
What fraction is shaded in blue?

$$\frac{10}{20} + \frac{4}{20} = \frac{14}{20}$$

Did you
get that?

In order to add fractions the denominator has to be the same.

This circle is divided into 20 pieces.
What fraction is shaded in blue?

This circle is divided into 20 pieces.
What fraction is shaded in blue?

$$\frac{10}{20} + \frac{4}{20} = \frac{14}{20}$$

**If they are not
then you are
adding pieces
that are not alike**

In order to add fractions the denominator has to be the same.

For example:
You cannot add
these two
fractional shapes
because they are
not the same.

In order to add fractions the denominator has to be the same.

For example:
You cannot add
these two
fractional shapes
because they are
not the same.

Read these word problems and answer the fraction addition problems.

I just got a huge box of chocolates!
The box contains chocolate with caramels,
pralines and nuts.

The box contains 20 candies and 3 are
caramels, 4 are pralines, 7 are nuts.

What fraction are caramels?
What fraction are pralines
What fraction are nuts?

**Does anyone know
what a praline is?**

Think about the denominator!
How many pieces is the whole box broken into?

The box contains 20 candies
and 3 are caramels, 4 are
pralines, 7 are nuts.

caramels

pralines

nuts

What fraction are caramels?
What fraction are pralines
What fraction are nuts?

So what is my
denominator?

Think about the denominator!
How many pieces is the whole box broken into?

**The box contains 20 candies
and 3 are caramels, 4 are
pralines, 7 are nuts.**

**What fraction are caramels?
What fraction are pralines
What fraction are nuts?**

caramels pralines nuts

Brilliant!

**The box is broken into 20 pieces.
That's your denominator (down) part
of the fraction**

Write down the fractions for each type of candy.

The box contains 20 candies
and 3 are caramels, 4 are
pralines, 7 are nuts.

caramels

pralines

nuts

What fraction are caramels?

What fraction are pralines

What fraction are nuts?

Write down the fractions for each type of candy.

The box contains 20 candies
and 3 are caramels, 4 are
pralines, 7 are nuts.

What fraction are caramels?

What fraction are pralines

What fraction are nuts?

caramels

$$\frac{3}{20}$$

pralines

$$\frac{4}{20}$$

nuts

$$\frac{7}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 20 candies and 3 are caramels, 4 are pralines, 7 are nuts.

What fraction are caramels?

What fraction are pralines

What fraction are nuts?

caramels

pralines

nuts

$$\frac{3}{20}$$

$$\frac{4}{20}$$

$$\frac{7}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 20 candies and 3 are caramels, 4 are pralines, 7 are nuts.

What fraction are caramels?

What fraction are pralines

What fraction are nuts?

caramels

pralines

nuts

$$\frac{4}{20}$$

$$\frac{3}{20} + \frac{7}{20} = \frac{10}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 10 chocolates and 3 are caramel pralines, 7 are

What fraction of the whole box is caramel pralines?
What fraction of the whole box is nuts?

Wait! I just re-read the box – there are also cream filled chocolates in this box!

pralines

nuts

$$\frac{4}{20}$$

$$\frac{3}{20} + \frac{7}{20} = \frac{10}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 20 candies in total. 3 are caramel, 7 are pralines, 7 are nuts and 3 are cream filled.

What fraction of the candies are pralines?

What fraction of the candies are nuts?

What fraction of the candies are either a caramel or a nut?

How many of the candies are cream filled?

pralines

nuts

$$\frac{7}{20}$$

$$\frac{3}{20} + \frac{7}{20} = \frac{10}{20}$$

How many of these candies are cream filled?

The box contains 20 candies and 3 are caramels, 4 are pralines, 7 are nuts.

What fraction are caramels?

What fraction are pralines

What fraction are nuts?

caramels

$$\frac{3}{20}$$

pralines

$$\frac{4}{20}$$

nuts

$$\frac{7}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 20 candies and 3 are caramels, 4 are pralines, 7 are nuts.

What fraction are caramels?

What fraction are pralines

What fraction are nuts?

caramels

pralines

nuts

$$\frac{3}{20}$$

$$\frac{4}{20}$$

$$\frac{7}{20}$$

$$\frac{3}{20} + \frac{4}{20} + \frac{7}{20} = \frac{14}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 20 pieces of candy and 3 are caramels, 7 are pralines, 7 are nuts and 3 are chocolates.

What fraction of the whole box are caramels?

What fraction of the whole box are pralines?

What fraction of the whole box are nuts?

If we already have 14 out of 20
How many are left?

pralines

nuts

$$\frac{4}{20}$$

$$\frac{7}{20}$$

$$\frac{3}{20} + \frac{4}{20} + \frac{7}{20} = \frac{14}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 20 pieces of candy in total. 3 are caramels, 7 are pralines, and 10 are nuts.

What fraction of the box are caramels?

What fraction of the box are pralines?

What fraction of the box are nuts?

Did you get it?
If we have 14 – there are 6 left.

pralines

nuts

$$\frac{4}{20}$$

$$\frac{7}{20}$$

$$\frac{3}{20} + \frac{4}{20} + \frac{7}{20} = \frac{14}{20}$$

What fraction of the whole box is either a caramel or a nut?

The box contains 20 chocolates in total. 3 are caramel, 4 are pralines, 7 are nuts and 6 are creams.

What fraction of the box are pralines?

What fraction of the box are nuts?

What fraction of the box are caramels and nuts?

So the box contains 3 caramel, 4 praline, 7 nut and 6 creams.

pralines

nuts

$$\frac{4}{20}$$

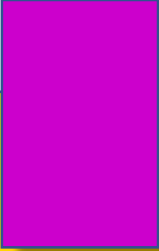

$$\frac{7}{20}$$

$$\frac{3}{20} + \frac{4}{20} + \frac{7}{20} = \frac{14}{20}$$

**Please complete
Home Link 5.3 in your book.**

**If you have a phone, send
me a picture of the work.
If not send me an email with the answers.**

**Tomorrow we will look at
fractions/decimals as they
work in this system.**

**Please complete 10 minutes
of First in Math!**
