

# Classwork 5-12-2020

Today we will review how to multiply numbers that have zeros at the end.

Good morning and Hello from Mrs. Cronin!

**Today is 5/12/2020**

**Where To Find Your Work:** <https://lynncronin.weebly.com/>

**Learning Objectives:** Today we will review how to multiply numbers that have zeros at the end.

**Learning Activities:** PowerPoint, Quizlet

**How We Communicate:** [lcronin@wtps.org](mailto:lcronin@wtps.org) / 856-857-7707

# Remember plop?

$$\begin{array}{r} 80 \\ \times 6 \\ \hline \end{array}$$

Plop says that When you are multiplying number that end in zero you multiply the “numbers” first then plop in the zeros to the end of the number.

# Plop!

$$\begin{array}{r} 80 \\ \times 6 \\ \hline \end{array}$$

$$8 \& 6$$

$$8 \times 6 = 48$$

$$480$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

# Try this one!

$$\begin{array}{r} 70 \\ \times 8 \\ \hline \end{array}$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Follow all the steps then check your answer on the next page.

# $70 \times 8 = ?$

$$\begin{array}{r} 70 \\ \times 8 \\ \hline \end{array}$$

$$7 \text{ \& } 8$$

$$7 \times 8 = 56$$

$$560$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Figure out what  $7 \times 8$  is then add the zero – then check your answer.

# How about this one?

$$\begin{array}{r} 40 \\ \times 5 \\ \hline \end{array}$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Figure out what 7 x 8 is then add the zero – then check your answer.

# How about this one?

$$\begin{array}{r} 40 \\ \times 5 \\ \hline \end{array}$$

$$4 \text{ \& } 5$$

$$4 \times 5 = 20$$

$$200$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

# How about this one?

$$\begin{array}{r} 600 \\ \times 3 \\ \hline \end{array}$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Figure out what 7 x 8 is then add the zero – then check your answer.

# How about this one?

$$\begin{array}{r} 600. \\ \times 3. \\ \hline \end{array}$$

Careful!  
The original  
problem has 2  
zeros!

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros.  
Count the number of zeros in the original problem

# How about this one?

$$\begin{array}{r} 600 \\ \times 3 \\ \hline \end{array}$$

$$6 \text{ \& } 3$$

$$6 \times 3 = 18$$

$$1800$$

2 zeros in the original problem  
2 zeros in the answer!

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

# Try this one

$$\begin{array}{r} 7,000 \\ \times 3 \\ \hline \end{array}$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Complete the problem then check your answer.

# Try this one

$$\begin{array}{r} 7,000 \\ \times 3 \\ \hline \end{array}$$

7 & 3

$$7 \times 3 = 21$$

21,000

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem
4. Add a comma if you would like to.

Try this one

$$\begin{array}{r} 90,000 \\ \times 6 \\ \hline \end{array}$$

### Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Complete the problem then check your answer.

# Try this one

$$\begin{array}{r} 90,000. \\ \times 6 \\ \hline \end{array}$$

Careful!  
How many  
zeros?

## Plop Steps

1. Find the two “numbers” to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros.  
Count the number of zeros in the original problem

Complete the problem then check your answer.

# Try this one

$$\begin{array}{r} 90,000 \\ \times 6 \\ \hline \end{array}$$

9 & 6

$$9 \times 6 = 54$$

540,000

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Always write the whole number first,  
then add the comma last!

$$90,000 \times 6 = 54 \text{ with 4 zeros}$$

Write that:

**540000**

Then add the comma or commas

**540,000**

Count 3 spaces from the zero.

# Try this one

$$\begin{array}{r} 700 \\ \times 60 \\ \hline \end{array}$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Complete the problem then check your answer.

# Try this one

$$\begin{array}{r} 700. \\ \times 60 \\ \hline \end{array}$$

Careful!  
Count all the zeros  
in the whole problem!  
This one has 3!

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros.  
Count the number of zeros in the original problem

Complete the problem then check your answer.

# Try this one

$$\begin{array}{r} 700 \\ \times 60 \\ \hline \end{array}$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

# Try this one

$$\begin{array}{r} 700 \\ \times 60 \\ \hline \end{array}$$

7 & 6

$$7 \times 6 = 42$$

42000

42,000

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

Please complete these 5 problems  
then send me the answers!

# 1. What is $600 \times 3$ ?

$$\begin{array}{r} 600 \\ \times 3 \\ \hline \end{array}$$

## Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

## 2. What is $50 \times 7$ ?

$$\begin{array}{r} 50 \\ \times 7 \\ \hline \end{array}$$

### Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

### 3. What is $30 \times 70$ ? Careful! Count all the zeros!

$$\begin{array}{r} 30 \\ \times 70 \\ \hline \end{array}$$

#### Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

## 4. What is $30,000 \times 7$ ?

$$\begin{array}{r} 30,000 \\ \times 7 \\ \hline \end{array}$$

### Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

## 5. What is $700 \times 70$ ? Careful! Count all the zeros!

$$\begin{array}{r} 700 \\ \times 70 \\ \hline \end{array}$$

### Plop Steps

1. Find the two "numbers" to multiply.
2. Do the multiplication.
3. Plop in the proper number of zeros. Count the number of zeros in the original problem

**Write down the answers  
and send me a picture!**

**then work on Quizlet:**

<https://quizlet.com/507264008/multiplication-week-of-may-11-to-15-flash-cards/>

**Please also complete  
10 minutes of First-In-Math!**
